Operation:
- Insert a 9V battery (2) or connect a regulated 9V power supply adaptor to the DC jack (4).
- Connecting an instrument to the input jack (3) will automatically switch the unit on.
- Connect your amplifier to the output jack (6). Select your desired sound with the 3 control knobs (7, 9, 10, 11, 12). *(see Sound examples)*
- Pressing the pedal (1) switches the unit on or off.
- Instead using this unit on the frontstage, you can place it with your equipment and control it with a standard momentary footswitch connected to the remote jack (5).
- Before changing the battery (2) always unplug the input jack (3) to switch the unit off.
- We suggest to use a regulated 9V power supply adaptor to keep our environment clean.
- Power supply specifications: see imprint on bottom of unit. - Thank you.

Important notes:
- Avoid using this unit in extreme humidity, heat or dust environment.
- When the unit is not in use for longer periods, remove the battery (2) to prevent damages by battery leakage.
- Also unplug the input (3) to prevent wasting battery life when the unit is not in use.

Specifications
- **Power**
  - 9V dry battery / AC adaptor
- **Consumption**
  - max. 15mA
- **Input impedance**
  - 1Mohm
- **Output impedance**
  - 2Kohm
- **Max. input**
  - -6dBm
- **Controls**
  - Feedback, Level, Speed, Intensity, Range
- **Jacks**
  - Input, DC, Remote, Output
- **Remote**
  - momentary switch
- **Display**
  - green LED indicator
- **Dimensions**
  - 74mmx126mmx58mm
- **Weight**
  - 450g (without Battery)

Specifications are subject to change without notice!

Function:
(3) **IN jack**: Inserting a plug switches the unit on.
(4) **9V DC jack**: Connect a regulated 9V power supply unit.
(5) **REMOTE jack**: The ON / OFF-function can be remote controlled by a momentary switch, connected to the REMOTE jack (5). Intelligent switching devices *(like the Nobels MF-2 or MS-4)* also can remote control the unit.
(6) **OUT jack**: This output delivers a low impedance signal best for the input of your amplifier.
(7) **FEEDBACK Control**: This feeds the phaseshifted signal back into the input and there with fattens the effect.
(8) **LED**: This Led shows the state of the effect. LED on = Effect on. The LED shows the actual speed of the low frequency oscillator (=LFO)
(9) **LEVEL control**: Adjusts the master volume of the effect.
(10) **SPEED control**: controls the speed of the LFO.
(11) **INTENSITY control**: controls the intensity of the LFO.
(12) **RANGE control**: Expands the frequency range of the phaseshifting.
